What To Do If You Have the Flu?

Stay home and avoid the emergency room unless you're seriously ill.

With Flu activity increasing in the area, it is important to know what to do if you or a family member has flu like symptoms. If you get sick with flu-like symptoms this flu season, you should stay home and avoid contact with other people - except to get medical care. Most people with H1N1 have had mild illness and have not needed medical care or antiviral drugs; and the same is true of seasonal flu.

How do you know if you have the flu?

You may have the flu if you have some or all of these symptoms:

Fever	Headache
Cough	chills
Sore throat	Fatigue
Runny or stuffy nose	Sometime diarrhea & vomiting
Body aches	

When should you go to the doctor?

Call a health care provider if you cannot take care for yourself or a loved one at home, or if you or a family member has a high fever with shaking chills, coughing that produces thick mucous, shortness of breath or trouble breathing or a worsening of an existing medical condition. However, some people are more likely to get flu complications and they should talk to a health care provider about whether they need to be examined if they get flu symptoms this season. They are:

- Children younger than 5, but especially children younger than 2 years old
- People 65 and older
- Pregnant women
- People who have:
 - Cancer
 - Blood disorders (including sickle cell disease)
 - Chronic lung disease (including asthma or chronic obstructive pulmonary disease, or COPD)
 - Diabetes
 - Heart disease
 - Kidney disorders

Cheboygan County
Doris E. Reid Center
825 S. Huron St., Suite 1
Cheboygan, MI 49721
(231) 627-8850
Fax (231) 627-9466

Montmorency County
P.O. Box 183
12265 M-32 W.
Atlanta, MI 49709
(989) 785-4428
Fax (989) 785-2217

Presque Isle County
151 E. Huron St.
P.O. Box 236
Rogers City, MI 49779
(989) 734-4723
Fax (989) 734-3866

- Liver disorders
- Neurological disorders (including nervous system, brain or spinal cord)
- Neuromuscular disorders (including muscular dystrophy and multiple sclerosis)
- Weakened immune systems (including people with AIDS)

Also, it's possible for healthy people to develop severe illness from the flu so anyone concerned about their illness should consult a health care provider.

Do you need to go the emergency room if you are only a little sick?

No. The emergency room should be used for people who are very sick. You should not go to the emergency room if you are only mildly ill. If you have the emergency warning signs of flu sickness, you should go to the emergency room. If you get sick with flu symptoms and are at high risk of flu complications or you are concerned about your illness, call your health care provider for advice. There are emergency warning signs. Anyone who has them should get medical care right away.

What are the emergency warning signs?

In children:

Fast breathing or trouble breathing

Not drinking enough fluids

Not waking up or not interacting

Being so irritable that the child does not want to be held

Flu-like symptoms improve but then return with fever and worse cough

Fever with a rash

In adults:

Difficulty breathing or shortness of breath

Pain or pressure in the chest or abdomen

Sudden dizziness

Confusion

Severe or persistent vomiting

Are there medicines to treat H1N1?

Yes. There are drugs your doctor may prescribe for treating both common and H1N1 viruses called "antiviral drugs." These drugs can make you better faster and may also prevent serious complications. This flu season, antiviral drugs are being used mainly to treat people who are very sick, such as people who need to be hospitalized, and to treat sick people who are more likely to get serious flu complications. Your health care provider will decide whether antiviral drugs are needed to treat your illness. Remember, most people with H1N1 have had mild illness and have not needed medical care or antiviral drugs and the same is true of seasonal flu.

How long should you stay home if you are sick?

CDC recommends that you stay home for at least 24 hours after your fever is gone except to get medical care or for other things you have to do and no one else can do for you. (Your fever should be gone without the use of a fever-reducing medicine, such as Tylenol®.) You should stay home from work, school, travel, shopping, social events, and public gatherings.

What should you do while you are sick?

Stay away from others as much as possible to keep from making them sick. If you must leave home, for example to get medical care, wear a facemask if you have one, or cover coughs and sneezes with a tissue. And wash your hands often to keep from spreading flu to others. CDC has information on "Taking Care of a Sick Person in Your Home" www.cdc.gov/flu.
